

NJK × Rice Resin®

We are committed to manufacturing products that are friendly to the earth and people, and from 2023 we will be using rice-derived (inedible rice and nonrecyclable rice) biomass resin as a material for our products.

Rice Resin® is a Japanese biomass plastic derived from rice(inedible rice and nonrecyclable rice). It is made from old rice that is not suitable for human consumption, crushed rice generated by rice snack manufacturers, rice that is not used as animal feed and disposed of as waste rice, and rice re- sources produced by utilizing abandoned rice paddies and fields.
